“Adversarial Risk Analysis”

I will present in this talk the basic ideas leading to the current framework for Adversarial Risk Analysis (ARA) as it was conceived at SAMSI around 2006-07. In particular, I will discuss the differences between ARA and the Game Theoretic approach to model adversaries behavior. This presentation will be useful to set the stage for Thursday’s working group session on ARA in which we will explore future research directions on ARA.
